9MA0 Unit Test Pure – 5 Binomial Theorem

- 1. (a) Find the binomial expansion of $\frac{1+x}{\sqrt{1-2x}}$ in ascending powers of x up to and including the x^2 [4] term, simplifying each term.
 - (b) State the set of values of x for which the expansion is valid. [1]
 - (c) Show that when $x = \frac{1}{100}$, the exact value of $\frac{1+x}{\sqrt{1-2x}}$ is $\frac{101\sqrt{2}}{140}$. [2]
 - (d) Substitute $x = \frac{1}{100}$ into the binomial expansion in part (a) and hence obtain an approximation to $\sqrt{2}$. Give your answer to 5 decimal places. [3]

Total: 6

- 2. Given that in the expansion of $\frac{1}{(1+ax)^2}$, the coefficient of the x^2 term is 75 find:
 - (a) the possible values of a, [4]
 - (b) the corresponding coefficients of the x^3 term.
- 3. The first three terms in the binomial expansion of $(a + bx)^{\frac{1}{3}}$ are

$$4 - \frac{1}{8}x + cx^2 + \cdots$$

- (a) Find the values of a and b. [5]
- (b) State the range of values of x for which the expansion is valid.
- (c) Find the value of c.

4.

$$f(x) = \frac{6}{2+3x} - \frac{4}{3-5x}, \qquad |x| < \frac{3}{5}.$$

- (a) Show that the first three terms in the series expansion of f(x) can be written as
 - $\frac{5}{3} \frac{121}{18}x + \frac{329}{108}x^2.$
- (b) Find the exact value of f(0.01).

Round your answer to 7 decimal places.

(c) Find the percentage error made in using the series expansion in part (a) to estimate the [3] value of f(0.01).

Give your answer to 2 significant figures.

Total: 12

5.

$$\frac{4x^2 - 4x - 9}{(2x+1)(x-1)} \equiv A + \frac{B}{2x+1} + \frac{C}{x-1}$$

- (a) Find the values of the constants A, B and C.
- (b) Hence, or otherwise, expand in ascending powers of x, as far as the x^2 term.
- (c) Explain why the expansion is not valid for $x = \frac{3}{4}$. [1]
