1. Find the set of values of x for which

$$2x(x-9) < (3x+1)(x-5).$$

2. (a) Given that

$$x = 2^p$$
 and $y = 2^{5p+1}$

express each of the following in the form 2^m , where m is a function of p:

i. *xy*

ii. $8x^2$

(b) Hence find the value of p for which

$$8x^2 - xy = 0.$$

- Total: 6
- 3. (a) Prove that the sum, S_n , of the first *n* terms of a geometric series with first term *a* and [4] common ratio *r* is given by $S_n = \frac{a(r^n 1)}{r 1}.$

 $\sum_{r=1}^{12} 3^r.$

(b) Hence evaluate

4. Figure shows the curve
$$x = 12 + 4y - y^2$$

- (a) Find the coordinates of the point B.
- (b) Find $\int 12 + 4y y^2 \, \mathrm{d}y$.

- (c) Hence find the area of the shaded region, R, enclosed by the curve and the y-axis.
- (a) Find, giving your answers in terms of π , all values of θ in the interval $0 \le \theta \le 2\pi$ for which [4]5.

$$\tan\left(\theta - \frac{\pi}{4}\right) = \sqrt{3}$$

[6] 180° for which

$$\sin^2(2x) = 0.64.$$

- 6. The line l passes through the points $A(5,\sqrt{2})$ and $B(k,4+3\sqrt{2})$ and has gradient $2\sqrt{2}$.
 - (a) Find an equation of the line l. [2](b) Show that $k = 6 + \sqrt{2}$. [4]
 - Given also that B is the mid-point of AC,
 - (c) find the coordinates of the point C.

7.

 $f(x) \equiv x^3 + ax^2 + bx - 24.$

Given that (x+2) and (x-3) are factors of f(x),

5x cm

12x cm

- (a) show that a = 3 and b = -10, [5]
- (b) factorise f(x) completely and solve the equation f(x) = 0,
- (c) find f'(x) and solve the equation f'(x) = 0, giving your answers correct to 2 decimal places. [4]
 - Total: 13

[4]

8. Figure shows the design for a ramp.

l cm

[4]

Total: 10

[3]

Total: 9

The shape of the ramp is a prism whose cross-section is a right-angled triangle of base 12x cm and height 5x cm. The length of the prism perpendicular to this cross-section is l cm.

The volume of the prism is to be 240000 cm^3 .

(a) Show that l can be expressed as

$$l = \frac{8000}{x^2}.$$

(b) Hence show that the surface area, $A \text{ cm}^2$, can be written as

$$A = 60x^2 + \frac{240,000}{x}$$

Given that x can vary,

- (c) use calculus to find the minimum value of A, [5]
- (d) justify that the value that you have found is a minimum.
